

Pricing Notice:

SteelMint Launches Domestic Aluminium Scrap Assessment for Delhi in Non-Ferrous Segment.

Aluminium is the most abundant and second most used metal because of its infinite recyclability, military-grade strength, corrosion resistance, lightweight versatility and energy efficiency.

In India, per capita consumption of aluminium is 2.9 kg against the world average of 11 kg (24 kg in China). In terms of production, aluminium stood at 3.60 million tonnes respectively in FY21 which is projected to increase to the level of 6 million Tonnes by 2025.

The Indian aluminium scrap market is import-dependent and nearly 70% of primarily scrap import is imported from USA, Europe and Middle East. Major imported scraps are TT (taint/tabor), tense, zorba etc. In domestic market Al scraps are most commonly known as purja scrap, bartan/utensil, wire and extrusion scraps. Major destination for aluminium scrap in India is Delhi NCR.

In an intent to expand our product portfolio to the non-ferrous segment in our scrap coverage and feedback from market, we have started Delhi NCR as the assessment centre for below mentioned scrap and ingots.

Utensil/Bartan

Extrusion 6063

Purja/Tense

TT (Taint Tabor)

Ingot ADC12

Country	Source	Commodity	Delivery Terms	Size & Grade	Quantity	Payment Term	Publication Frequency	Publication Date & Time
